From: Tori Williams, Director, Ryan White Office of Support

Date: Tuesday, April 5, 2022

Re: Meeting Announcement

Please note that the Ryan White Planning Council will be meeting as follows:

Ryan White Planning Council Meeting
12 noon, Thursday, April 14, 2022

Meeting Location: Online or via phone

Click on the following link to join the Zoom meeting:

<https://us02web.zoom.us/j/995831210?pwd=UnlNdExMVFFqeVgzQ0NJNkpieXlGQT09>

Meeting ID: 995 831 210

Passcode: 577264

Or, use the following telephone number: 346 248-7799

Please contact Rod Avila to RSVP, even if you cannot attend. She can be reached at 832 927-7926. Or, by responding to one of her email reminders.

Thank you.

HOUSTON AREA HIV SERVICES RYAN WHITE PLANNING COUNCIL

We envision an educated community where the needs of all persons living with and/or affected by HIV are met by accessible, effective, and culturally sensitive health and psychosocial services that are part of a fully coordinated system.

The community will continue to intervene responsibly until the end of the epidemic.

The Houston Eligible Metropolitan Area (EMA) Ryan White Planning Council will improve the quality of life and advocate for those living with and/or affected by HIV by taking a leadership role in the planning and assessment of HIV resources.

AGENDA

12 noon, Thursday, April 14, 2022

Meeting Location (quorum requires 11 members to meet in person):

**St. Philip Presbyterian Church – Fellowship Hall
4807 San Felipe, Houston, Texas 77056**

Online or via phone (remaining members can meet virtually)

Click on the following link to join the Zoom meeting:

<https://us02web.zoom.us/j/995831210?pwd=UnlNdExMVFFqeVgzQ0NJNkpieXlGQT09>

Meeting ID: 995 831 210 Passcode: 577264

Or, use the following telephone number: 346 248-7799

- I. Call to Order
A. Welcome, Moment of Reflection and Introductions
B. Adoption of the Agenda
C. Approval of the Minutes
D. The How To Best Meet the Need Process

Crystal R. Starr, Chair
Ryan White Planning Council

Daphne L. Jones and
Denis Kelly, Co-Chairs
Quality Improvement
Committee
- II. Public Comments and Announcements
(NOTE: If you wish to speak during the Public Comment portion of the meeting, please sign up on the clipboard at the front of the room. No one is required to give his or her name or HIV status. All meetings are audio taped by the Office of Support for use in creating the meeting minutes. The audiotape and the minutes are public record. If you state your name or HIV status it will be on public record. If you would like your health status known, but do not wish to state your name, you can simply say: "I am a person living with HIV", before stating your opinion. If you represent an organization, please state that you are representing an agency and give the name of the organization. If you work for an organization, but are representing yourself, please state that you are attending as an individual and not as an agency representative. Individuals can also submit written comments to the Council Secretary who would be happy to read the comments on behalf of the individual at this point in the meeting. The Chair of the Council has the authority to limit public comment to 1 minute per person. All information from the public must be provided in this portion of the meeting. Council members please remember that this is a time to hear from the community. It is not a time for dialogue. Council members and staff are asked to refrain from asking questions of the person giving public comment.)
- III. Reports from Committees
A. Comprehensive HIV Planning Committee

Steven Vargas and
Josh Mica, Co-Chairs

*Item: 2022 Integrated HIV Prevention and Care Services Plan
Recommended Action: FYI: The timeline to produce the 2022
Integrated Plan is as follows (see attached, detailed timeline):*

- Write select portions of the plan using consultants - done
- Gather data – January thru June
- Educate the community on the data gathered – April thru June
- Community meetings to finalize the EHE Plan – July
- Community meetings to create strategies & more for the Integ. Plan – Aug.
- Write remaining portions of the Plan – Sept thru Nov
- Polish and submit the Plan – late November (Due Dec. 9, 2022)

Item: 2022 Integrated HIV Prevention and Care Services Plan
Recommended Action: FYI: Verbal updates on the Quality of Life Workgroup and the Focus Group meetings.

Item: 2022 Integrated HIV Prevention and Care Services Plan
Recommended Action: FYI: Should Houston share our crosswalk of national, state and local comprehensive plans with others in Texas as a show of collaboration and cooperation among all Texas planning bodies? Ask to be credited for the baseline document?

B. Affected Community Committee Holly Renee McLean and
Tony Crawford, Co-Chairs
 The Committee did not meet in March so that members could attend the Joint Meeting of all committees to review and approve the criteria used to justify the FY 2023 service definitions.

C. Quality Improvement Committee Denis Kelly and
Daphne Jones, Co-Chairs
Item: Criteria for FY 2023 Service Categories
Recommended Action: **Motion:** Approve the attached criteria to be used to justify the FY 2023 Service Categories.

Item: Reports from AA – Part A/MAI*
Recommended Action: FYI: See the attached reports from the Part A/MAI Administrative Agent:

- FY21 Procurement Report – Part A/MAI, dated 03/08/22
- FY21 Service Utilization Report, 3rd Qtr. – Part A/MAI, dated 03/08/22
- FY20 Chart Reviews:
 - Primary Care
 - Case Management
 - Oral Health – Rural
 - Vision Care

Item: Reports from the Administrative Agent – Part B/SS
Recommended Action: FYI: See the attached reports from the Part B/ State Services (SS) Administrative Agent:

- FY21 Health Insurance Program Report, dated 03/09/22

D. Operations Committee Ronnie Galley and
Matilda Padilla, Co-Chairs
Item: In-Person vs. Virtual Meetings
Recommended Action: **Motion:** Due to the loss of the large meeting rooms at the current office location, and the impending move to another location:

- Planning Council meetings will be held off-site as hybrid meetings.
- Ryan White standing committee and many workgroup meetings will continue to be held virtually.

If a member of a committee or the public wish to attend a standing committee or workgroup meeting in person, up to four individuals can participate in the meeting at the Office of Support, with preference given to the public and the committee/workgroup meeting co-chairs.

Item: Committee Vice Chair

Recommended Action: FYI: Skeet Boyle was elected to serve as the Committee Vice Chair.

Item: 2022 Council Training Schedule

Recommended Action: FYI: The Operations Committee is going to collaborate with the Comprehensive HIV Planning Committee to coordinate 2022 Council trainings with trainings for the Integrated Plan.

Josh Mica	Nkechi Onyewuenyi	Tori Williams
Rodney Mills	Matilda Padilla, excused	Mackenzie Hudson
Diana Morgan	Andrew Wilson	Diane Beck
		Rod Avila

Call to Order: Crystal Starr, Chair, called the meeting to order at 12:08 p.m.

During the opening remarks, Starr thanked the members and staff of St. Philip Presbyterian Church for graciously allowing us to use their beautiful campus to host our meetings. Special thanks to Chuck Johnson, the caterer who provided meals at Project LEAP for many years and opened the door for us at St. Philip Church and Lorrie Castle, the Director of Operations and staff person extraordinaire. Starr

then thanked Robert Sliepka for making the cupcakes to help us celebrate being together as a group. Whether members are participating in person or online, we are lucky to be together doing meaningful work and enjoying each other's company. She also thanked everyone who participated in the Joint Training on "Looking at HIV Care Services through a Racial Justice Lens". If the Council approves adding a Quality of Life pillar to our Integrated HIV Prevention and Care Services Plan, we hope that a lot of Council members will participate in these very interesting meetings. Some of the work we are doing is innovative and lots of folks who have never been a CPG or a Planning Council member will be involved in the workgroup meetings, as they have in the trainings. This is a great opportunity for our members to recruit future LEAP students, Council members, Road 2 Success participants and more.

Starr then called for a Moment of Reflection.

Adoption of the Agenda: **Motion #1:** *it was moved and seconded (Ligons, Galley) to adopt the agenda with one change, the date of the Agenda should read March 10, 2022. Motion carried.*

Approval of the Minutes: **Motion #2:** *it was moved and seconded (Sliepka, Pradia) to approve the February 10, 2022 minutes. Motion carried.* Abstentions: Belcher, Patel.

Tentative: The Houston Area Ending the HIV Epidemic Plan: Williams said that this presentation has been postponed until they have more information.

Changes to the Open Meetings Act: Williams presented the attached information.

Public Comment and Announcements: LCDR Lawrence Momodu, the new HRSA Project Officer for the Houston EMA, introduced himself and talked about his background. He said he has been with the HIV/AIDS Bureau for 6 years. He has worked with several other jurisdictions and is familiar with our program.

Shabaura Perryman, Merck HIV Community Liaison said that she is working out in the field now. If any Ryan White funded organizations need unbranded educational presentations for Lunch and Learn or consumer programs she is always available.

Reports from Committees

Comprehensive HIV Planning Committee: Steven Vargas, Co-Chair, reported on the following: Committee Orientation: All Committees dedicated the first portion of their February meeting to general orientation, which included a review of the purpose of the committee and the definition of conflict of interest, the requirements of the Open Meetings Act, Petty Cash restrictions, work products, meeting dates and more.

2022 Integrated HIV Prevention and Care Services Plan: The Committee is working closely with Office of Support staff and others to bring the community together and develop the 2022 HIV Prevention and Care Services Plan. Details regarding the development of the Plan and how all can be involved will be presented in March. Note: The staff will follow the HRSA guidelines in preparing the document. Information gathered from Quality of Life workgroup meetings will be included along with all required information. **Motion #3:** *Include a Quality of Life pillar in the 2022 Houston Integrated HIV Prevention and Care Services Plan. Motion Carried.* Abstention: Turner.

Affected Community Committee: Tony Crawford, Co-Chair, reported on the following: Committee Orientation: The Committee reviewed the purpose of the Council, public hearings and committee participation in health fairs. Note: The committee changed its monthly meeting to 12 noon, the second Monday after Council meets.

Committee Vice Chair: Johnny Deal was elected as the Vice Chair for the Committee.

Quality Improvement Committee: Denis Kelly, Co-Chair, reported on the following:

Reports from Administrative Agent – Part A/MAI*: See the attached reports:

- FY21 Procurement Report – Part A & MAI, dated 01/31/22
- Clinical Quality Management Committee Report, received 12/07/21

Reports from Administrative Agent – Part B/State Services:

- How To Read TRG Reports 2022
- FY21 Procurement Report Part B, dated 01/25/22
- FY21 Procurement Report SS, dated 01/25/22
- FY21 Service Utilization Report Part B 3rd Qtr., dated 02/01/22
- FY21 Service Utilization Report SS, dated 01/03/22
- FY21 Health Insurance Program Report, dated 01/07/22

Committee Vice Chair: Kevin Aloysius was elected as the Vice Chair for the Committee.

Operations Committee: Ronnie Galley, Co-Chair, reported on the following:

There was no February Committee meeting since this Committee has been meeting without a break since September 2021.

Priority and Allocations Committee: Bobby Cruz, Co-Chair, reported on the following:

Policy for Addressing Unobligated & Carryover Funds: **Motion #4:** *Approve the attached 2022 Policy for Addressing Unobligated and Carryover Funds.* **Motion Carried.** Abstention: Kelly, May, Shaikh.

FY22 Unspent Funds: **Motion #5:** *Ask the RW Part A administrative agent to rebid the \$160,000 allocation for pediatric care services.* **Motion Carried.** Abstention: Castillo, Jenkins, Kelly, Patel.

FY23 Guiding Principles and Criteria: **Motion #6:** *Approve the attached FY 2023 Guiding Principles and Decision Making Criteria.* **Motion Carried.** Abstention: Aloysius.

FY 2023 Priority Setting Process: **Motion #7:** *Approve the attached FY 2023 Priority Setting Process.* **Motion Carried.** Abstention: Aloysius.

Committee Vice Chair: Bruce Turner was elected as the vice chair for the Committee.

Report from Office of Support: Tori Williams, Director, summarized the attached report.

Report from Ryan White Grant Administration: Carin Martin, Manager, summarized the attached report. She said that the office move has been pushed back until at least August.

Report from The Resource Group: Sha'Terra Johnson, Health Planner, submitted the attached report. She said that even though the future of the Early Intervention Services program in the jail is unknown at this time, SIRR will continue to meet as a community group focusing on this high priority population.

Medical Updates: Dr. Patel presented data from the CROI 2022 regarding the patients cured of HIV, see attached.

Task Force Reports: Starr said that the Council agreed some time ago that they preferred not to have verbal Task Force Reports while meeting on Zoom. The Office of Support is happy to receive and distribute written reports in advance of all Council meetings. See attached report from the HIV and Aging Coalition.

Announcements: Chavez PACE Program invited everyone to 2022 PACHA Session "PACHA to the People" on March 14-15. Register here: https://roseliassociates.zoomgov.com/meeting/register/vJltdOqrrT8jHAQpcB_svSY_r2OxgtxhObI. Sunday is Rod Avila’s birthday, the Council presented her with a card and a gift and sang Happy Birthday. Starr asked everyone to send her their birthdate

Adjournment: Motion: *it was moved and seconded (Deal, Boyle) to adjourn the meeting at 1:38 p.m.*
Motion Carried.

Respectfully submitted,

Victoria Williams, Director

**Comprehensive HIV
Planning Committee
Report**

Overview and Timeline for the 2022 Integrated Plan

Gather Data

Present Data to the Community

Community Meetings to develop the Goals, Solutions, Benchmarks and Activities

Write portions of the Plan

2021			Specific Integrated Planning Activity: Develop A Quality of Life Pillar
	Council Activities	Integrated Planning Activities	
04/21 – 08/21	Joint Trainings on Diagnose	Use the Joint Trainings to begin to collect data	
11/21 – 02/22		Develop the Resource Inventory, Collect and Compare Local Needs Assessments, and Research Other Community Plans	
2022			
02/24 -05/31	Joint Trainings on Treat, Prevent & Respond	Continue to collect data from Joint Trainings	
03/02-05/31		Focus Group Meetings with Priority Populations and Key Stakeholder Interviews	
Workgp. Mtngs: 03/31/22 04/07/22 05/05/22 05/18/22			Workgroup Meetings to Develop the Quality of Life Pillar <ul style="list-style-type: none"> ➤ Definition, Strategies, Activities & Timeline – March thru May ➤ Consumers Present Above at Community Mting - June ➤ Write up the process – Aug or Sept
04/14/22	Community Training on the Racial Justice Tool(s) for How To Best Meet the Need		

04/18-05/03	How To Best Meet the Need Workgroup Meetings		
05/17-06/09	Review and approve the recommendations of the How To Best Meet the Need process		
05/01-06/31		Work with the Community to develop the decision-making structure for developing the plan	
06/01-06/30		Review focus group data, crosswalk, resource inventory and more to the community	Consumers present QoL data, strategies, act & timeline to the community
07/01-08/31		Community meetings to develop EHE and Integrated Plan strategies, solutions/ activities and benchmarks	Make sure QoL recommendations are included
07/27 – 11/23	Project LEAP		
09/01-10/15		Mackenzie writes outstanding portions of the document	
10/15-11/15		Mackenzie and others assemble and polish the document	
11/28		SUBMIT THE INTEGRATED PLAN	
12/09		INTEGRATED PLAN IS DUE	

Collapsed List of Priority Populations

2022 List of CPG and Planning Council priority populations:

- Transgender folks, esp. those who are LatinX/Black and/or under the age of 25
- Gay, bisexual MSM, esp. those who are LatinX/Black
- People who exchange sex for money, etc.
- People who inject drugs or use methamphetamine or crack
- Heterosexual cisgender women of color, esp. those living in high HIV or STI prevalence neighborhoods
- People who were born outside the US
- Youth

Other populations:

- People who have known HIV+ partners (probably covered under other groups)
- People who are living in poverty (almost certainly covered in other groups)
- People who have experienced intimate partner violence (probably covered under other groups)
- Sex Offenders

An Invitation from Venita Ray...

Please join us to work on issues like HIV and housing, aging, isolation, racism *and more*. Help us to bring these **QUALITY OF LIFE** concerns to the forefront as we plan recommendations for HIV prevention and care services to be implemented over the next 5 years.

Click here for a special video invitation from Venita! <https://youtu.be/qrCeZebrO1g>

**This workgroup is for consumers only --
ALL People Living with HIV are encouraged to attend**

Please join us at 4 pm on Thursday, April 7th

Registration is required.
Register here: bit.ly/QoL-consumer

Meetings will be hybrid (Zoom and in person, *your choice!*)
Email diane.beck@cjo.hctx.net for information and to be notified about these meetings.

PREFACE

EXPLANATION OF PART A QUALITY MANAGEMENT

In 2020, the Houston Eligible Metropolitan Area (EMA) awarded Part A funds for adult Outpatient Ambulatory Medical Services to six organizations. Approximately 13,000 unduplicated individuals living with HIV receive Ryan White-funded services at these organizations.

Harris County Public Health (HCPH) must ensure the quality and cost effectiveness of primary medical care. The medical services chart review is performed to ensure that the medical care provided adheres to current evidence-based guidelines and standards of care. The Ryan White Grant Administration (RWGA) Project Coordinator for Clinical Quality Improvement (PC/CQI) performed the medical services review.

Introduction

On March 30, 2021, the RWGA PC/CQI commenced the evaluation of Part A funded Primary Medical Care Services funded by the Ryan White Part A grant. This grant is awarded to HCPH by the Health Resources and Services Administration (HRSA) to provide HIV-related health and social services to people living with HIV. The purpose of this evaluation project is to meet HRSA mandates for quality management, with a focus on:

- evaluating the extent to which primary care services adhere to the most current United States Department of Health and Human Services (DHHS) HIV treatment guidelines;
- provide statistically significant primary care utilization data including demographics of individuals receiving care; and,
- make recommendations for improvement.

A comprehensive review of client medical records was conducted for services provided between 3/1/20 and 2/28/21. The guidelines in effect during the year the patient sample was seen, *Guidelines for the Use of Antiretroviral Agents in Adults and Adolescents Living with HIV* were used to determine degree of compliance. The current treatment guidelines are available for download at: <http://www.aidsinfo.nih.gov/ContentFiles/AdultandAdolescentGL.pdf>. The initial activity to fulfill the purpose was the development of a medical record data abstraction tool that addresses elements of the guidelines, followed by medical record review, data analysis and reporting of findings with recommendations.

Tool Development

The PC/CQI worked with the Clinical Quality Improvement (CQI) committee to develop and approve data collection elements and processes that would allow evaluation of primary care services based on the most current *Guidelines for the Use of Antiretroviral Agents in Adults and Adolescents Living with HIV* that were developed by the Panel on Antiretroviral Guidelines for Adults and Adolescents convened by the DHHS. In addition, data collection elements and processes were developed to align with the Health Resources and Services Administration (HRSA), HIV/AIDS Bureau's (HAB) HIV/AIDS Clinical Performance Measures for Adults & Adolescents. These measures are designed to serve as indicators of quality care. HAB measures are available for download at: <http://hab.hrsa.gov/deliverhivaidsca/habperformmeasures.html>. An electronic database was designed to facilitate direct data entry from patient records. Automatic edits and validation screens were included in the design and layout of the data abstraction program to "walk" the nurse reviewer through the process and to facilitate the accurate collection, entering and validation of data. Inconsistent information, such as reporting GYN exams for men, or opportunistic infection prophylaxis for patients who do not need it, was considered when designing validation functions. The PC/CQI then used detailed data validation reports to check certain values for each patient to ensure they were consistent.

Chart Review Process

All charts were reviewed by a Master's-level registered nurse experienced in identifying documentation issues and assessing adherence to treatment guidelines. The collected data for each site was recorded directly into a preformatted computerized database. The data collected during this process is to be used for service improvement.

If documentation on a particular element was not found, a "no data" response was entered into the database. For some data elements, the reviewer looked for documentation that the requisite test/assessment/vaccination was performed, e.g., lipid screening or pneumococcal vaccination. Other data elements required that several questions be answered in an "if, then" format. For example, if a Pap smear was abnormal, then was a colposcopy performed? This logic tree type of question allows more in-depth assessment of care and a greater ability to describe the level of quality. Using another example, if only one question is asked, such as "was a mental health screening done?" the only assessment that can be reported is how many patients were screened. More questions need to be asked to evaluate quality and the appropriate assessment and treatment, e.g., if the mental health screening was positive, was the client referred? If the client accepted a referral, were they able to access a Mental Health Provider?

The specific parameters established for the data collection process were developed from national HIV care guidelines.

Review Item	Standard
Primary Care Visits	Primary care visits during review period, denoting date and provider type (MD, NP, PA, other). There is no standard of care to be met per se. Data for this item is strictly for analysis purposes only
Annual Exams	Dental exams are recommended annually
Mental Health	A Mental Health screening is recommended annually screening for depression, anxiety, and associated psychiatric issues
Substance Abuse	Clients should be screened for substance abuse potential annually and referred accordingly

Tale 1. Data Collection Parameters (cont.)	
Review Item	Standard
Antiretroviral Therapy (ART) adherence	Adherence to medications should be documented at every visit with issues addressed as they arise
Lab	Viral Load Assays are recommended every 3-6 months. Clients on ART should have a Lipid Profile annually (minimum recommendations)
STD Screen	Screening for Syphilis, Gonorrhea, and Chlamydia should be performed at least annually for clients at risk
Hepatitis Screen	Screening for Hepatitis B and C are recommended at initiation to care. At risk clients not previously immunized for Hepatitis A and B should be offered vaccination.
Tuberculosis Screen	Screening is recommended at least once since HIV diagnosis, either PPD, IGRA or chest X-ray.
Cervical Cancer Screen	Women are assessed for at least one PAP smear during the previous three years
Immunizations	Clients are assessed for annual Flu immunizations and whether they have ever received pneumococcal vaccination.
HIV Risk Counseling	Clients are screened for behaviors associated with HIV transmission and risk reduction discussed
Pneumocystis jirovecii Pneumonia (PCP) Prophylaxis	Labs are reviewed to determine if the client meets established criteria for prophylaxis

The Sample Selection Process

The sample population was selected from a pool of 8,096 clients (adults age 18+) who accessed Part A primary care (excluding vision care) and had at least two visits, at least 90 days apart, between 3/1/20 and 2/28/21. The medical charts of 635 clients were used in this review, representing 7.8% of the pool of unduplicated clients. The number of clients selected at each site is proportional to the number of primary care clients served there. Three caveats were observed during the sampling process. In an effort to focus on women living with HIV health issues, women were over-sampled, comprising 42.2% of the sample population. Second, providers serving a relatively small number of clients were over-sampled in order to ensure sufficient sample sizes for data analysis. Finally, transgender clients were oversampled in order to collect data on this sub-population.

In an effort to make the sample population as representative of the Part A primary care population as possible, the EMA's Centralized Patient Care Data Management System (CPCDMS) was used to generate the lists of client codes for each site. The demographic

make-up (race/ethnicity, gender, age) of clients who accessed primary care services at a particular site during the study period was determined by CPCDMS. A sample was then generated to closely mirror that same demographic make-up.

Characteristics of the Sample Population

Due to the desire to over sample for female clients, the review sample population is not generally comparable to the Part A population receiving outpatient primary medical care in terms of race/ethnicity, gender, and age. No medical records of children/adolescents were reviewed, as clinical guidelines for these groups differ from those of adult patients. Table 2 compares the review sample population with the Ryan White Part A primary care population as a whole.

Table 2. Demographic Characteristics of Clients During Study Period 3/1/20-2/28/21

Report Structure

In November 2013, the Health Resource and Services Administration's (HRSA), HIV/AIDS Bureau (HAB) revised its performance measure portfolio¹. The categories included in this report are: Core, All Ages, and Adolescents/Adult. These measures are intended to serve as indicators for use in monitoring the quality of care provided to patients receiving Ryan White funded clinical care. In addition to the HAB measures, several other primary care performance measures are included in this report. When available, data and results from the two preceding years are provided, as well as comparison to EMA goals. Performance measures are also depicted with results categorized by race/ethnicity.

Findings

Core Performance Measures

Viral Load Suppression

- Percentage of clients living with HIV with viral load below limits of quantification (defined as <200 copies/ml) at last test during the measurement year

	2018	2019	2020
Number of clients with viral load below limits of quantification at last test during the measurement year	553	559	571
Number of clients who: <ul style="list-style-type: none"> had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year, and were prescribed ART for at least 6 months 	630	625	634
Rate	87.8%	89.4%	90.1%
	2.3%	1.6%	.7%

2020 Viral Load Suppression by Race/Ethnicity			
	Black	Hispanic	White
Number of clients with viral load below limits of quantification at last test during the measurement year	259	235	65
Number of clients who: <ul style="list-style-type: none"> had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year, and were prescribed ART for at least 6 months 	294	254	74
Rate	88.1%	92.5%	87.8%

ART Prescription

- Percentage of clients living with HIV who are prescribed antiretroviral therapy (ART)

	2018	2019	2020
Number of clients who were prescribed an ART regimen within the measurement year	631	627	635
Number of clients who: • had at least two medical visit with a provider with prescribing privileges, i.e. MD, PA, NP in the measurement year	635	635	635
Rate	99.4%	98.7%	100%
Change from Previous Years Results	.7%	-.7%	2.3%

2020 ART Prescription by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who were prescribed an ART regimen within the measurement year	294	255	74
Number of clients who: • had at least two medical visit with a provider with prescribing privileges, i.e. MD, PA, NP in the measurement year	294	255	74
Rate	100%	100%	100%

PCP Prophylaxis

- Percentage of clients living with HIV and a CD4 T-cell count below 200 cells/mm³ who were prescribed PCP prophylaxis

	2018	2019	2020
Number of clients with CD4 T-cell counts below 200 cells/mm ³ who were prescribed PCP prophylaxis	62	34	41
Number of clients who: • had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year, and • had a CD4 T-cell count below 200 cells/mm ³ , or any other indicating condition	66	38	41
Rate	93.9%	89.5%	100%
Change from Previous Years Results	.9%	-4.4%	10.5%

2020 PCP Prophylaxis by Race/Ethnicity			
	Black	Hispanic	White
Number of clients with CD4 T-cell counts below 200 cells/mm ³ who were prescribed PCP prophylaxis	16	22	3
Number of clients who: • had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least once in the measurement year, and • had a CD4 T-cell count below 200 cells/mm ³ , or any other indicating condition	16	22	3
Rate	100%	100%	100%

All Ages Performance Measures

Viral Load Monitoring

- Percentage of clients living with HIV who had a viral load test performed at least every six months during the measurement year

	2018	2019	2020
Number of clients who had a viral load test performed at least every six months during the measurement year	624	619	618
Number of clients who had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year	635	635	635
Rate	98.3%	97.5%	97.3%
Change from Previous Years Results	.3%	-0.8%	-0.2%

2020 Viral Load by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who had a viral load test performed at least every six months during the measurement year	290	248	68
Number of clients who had a medical visit with a provider with prescribing privileges ¹ , i.e. MD, PA, NP at least twice in the measurement year	294	255	74
Rate	98.6%	97.3%	91.9%

HIV Drug Resistance Testing Before Initiation of Therapy

- Percentage of clients living with HIV who had an HIV drug resistance test performed before initiation of HIV ART if therapy started in the measurement year

	2018	2019	2020
Number of clients who had an HIV drug resistance test performed at any time before initiation of HIV ART	6	5	4
Number of clients who: • had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year, and • were prescribed ART during the measurement year for the first time	8	7	4
Rate	75%	71.4%	100%
Change from Previous Years Results	3.6%	-3.6%	28.6%

2020 Drug Resistance Testing by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who had an HIV drug resistance test performed at any time before initiation of HIV ART	0	1	3
Number of clients who: • had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year, and • were prescribed ART during the measurement year for the first time	0	1	3
Rate		100%	100%

*Agencies A, D, E, & F did not have any clients that met the denominator

Influenza Vaccination

- Percentage of clients living with HIV who have received influenza vaccination within the measurement year

	2018	2019	2020
Number of clients who received influenza vaccination within the measurement year	336	362	281
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement period	534	531	565
Rate	62.9%	68.2%	49.7%
Change from Previous Years Results	9.4%	5.3%	-18.5%

- The definition excludes from the denominator medical, patient, or system reasons for not receiving influenza vaccination

2020 Influenza Screening by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who received influenza vaccination within the measurement year	122	124	29
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	250	237	67
Rate	48.8%	52.3%	43.3%

Lipid Screening

- Percentage of clients living with HIV on ART who had fasting lipid panel during measurement year

	2018	2019	2020
Number of clients who: • were prescribed ART, and • had a fasting lipid panel in the measurement year	567	554	594
Number of clients who are on ART and who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	631	627	635
Rate	89.9%	88.4%	93.5%
Change from Previous Years Results	1.1%	-1.5%	5.1%

2020 Lipid Screening by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who: • were prescribed ART, and • had a fasting lipid panel in the measurement year	275	237	71
Number of clients who are on ART and who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	294	255	74
Rate	93.5%	92.9%	95.9%

Tuberculosis Screening

- Percent of clients living with HIV who received testing with results documented for LTBI with any approved test (tuberculin skin test [TST] or interferon gamma release assay [IGRA]) since HIV diagnosis

	2018	2019	2020
Number of clients who received documented testing for LTBI with any approved test (tuberculin skin test [TST] or interferon gamma release assay [IGRA]) since HIV diagnosis	401	426	454
Number of clients who: <ul style="list-style-type: none"> do not have a history of previous documented culture-positive TB disease or previous documented positive TST or IGRA; and had a medical visit with a provider with prescribing privileges at least twice in the measurement year. 	565	570	567
Rate	71%	74.7%	80.1%
Change from Previous Years Results	3.8%	3.7%	5.4%

2020 TB Screening by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who received documented testing for LTBI with any approved test (tuberculin skin test [TST] or interferon gamma release assay [IGRA]) since HIV diagnosis	204	187	56
Number of clients who: <ul style="list-style-type: none"> do not have a history of previous documented culture-positive TB disease or previous documented positive TST or IGRA; and had a medical visit with a provider with prescribing privileges at least once in the measurement year. 	263	224	71
Rate	77.6%	83.5%	78.9%

Adolescent/Adult Performance Measures

Cervical Cancer Screening

- Percentage of women living with HIV who have Pap screening results documented in the previous three years

	2018	2019	2020
Number of female clients who had Pap screen results documented in the previous three years	199	214	208
Number of female clients: <ul style="list-style-type: none"> for whom a pap smear was indicated, and who had a medical visit with a provider with prescribing privileges at least twice in the measurement year* 	244	260	259
Rate	81.6%	82.3%	80.3%
Change from Previous Years Results	-.9%	.7%	-2%

- 13.9% (29/208) of pap smears were abnormal

2020 Cervical Cancer Screening Data by Race/Ethnicity			
	Black	Hispanic	White
Number of female clients who had Pap screen results documented in the previous three years	122	76	8
Number of female clients: <ul style="list-style-type: none"> for whom a pap smear was indicated, and who had a medical visit with a provider with prescribing privileges at least twice in the measurement year 	155	92	9
Rate	78.7%	82.6%	88.9%

Gonorrhea/Chlamydia Screening

- Percent of clients living with HIV at risk for sexually transmitted infections who had a test for Gonorrhea/Chlamydia within the measurement year

	2018	2019	2020
Number of clients who had a test for Gonorrhea/Chlamydia	501	506	503
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	635	635	635
Rate	78.9%	79.7%	79.2%
Change from Previous Years Results	1.3%	.8%	-.5%

- 20 cases of chlamydia and 22 cases of gonorrhea were identified

2020 GC/CT by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who had a serologic test for syphilis performed at least once during the measurement year	237	201	57
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	294	255	74
Rate	80.6%	78.8%	77%

Hepatitis B Screening

- Percentage of clients living with HIV who have been screened for Hepatitis B virus infection status

	2018	2019	2020
Number of clients who have documented Hepatitis B infection status in the health record	577	571	588
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	635	635	635
Rate	90.9%	89.9%	92.6%
Change from Previous Years Results	3.8%	-1%	2.7%

- 1.4% (9/635) were Hepatitis B positive

2020 Hepatitis B Screening by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who have documented Hepatitis B infection status in the health record	275	231	70
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	294	255	74
Rate	93.5%	90.6%	94.6%

Hepatitis B Vaccination

- Percentage of clients living with HIV who completed the vaccination series for Hepatitis B

	2018	2019	2020
Number of clients with documentation of having ever completed the vaccination series for Hepatitis B	171	177	179
Number of clients who are Hepatitis B Nonimmune and had a medical visit with a provider with prescribing privileges at least twice in the measurement year	347	342	344
Rate	49.3%	51.8%	52%
Change from Previous Years Results	-2.1%	2.5%	.2%

2020 Hepatitis B Vaccination by Race/Ethnicity			
	Black	Hispanic	White
Number of clients with documentation of having ever completed the vaccination series for Hepatitis B	65	94	18
Number of clients who are Hepatitis B Nonimmune and had a medical visit with a provider with prescribing privileges at least twice in the measurement year	132	170	39
Rate	49.2%	55.3%	46.2%

Hepatitis C Screening

- Percentage of clients living with HIV for whom Hepatitis C (HCV) screening was performed at least once since diagnosis of HIV

	2018	2019	2020
Number of clients who have documented HCV status in chart	604	612	611
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	635	635	635
Rate	95.1%	96.4%	96.2%
Change from Previous Years Results	2.3%	1.3%	-.2%

- 9.1% (58/635) were Hepatitis C positive, including 15 acute infections only and 34 cures (79%)

2020 Hepatitis C Screening by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who have documented HCV status in chart	280	246	73
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	294	255	74
Rate	95.2%	96.5%	98.6%

HIV Risk Counseling

- Percentage of clients living with HIV who received HIV risk counseling within measurement year

	2018	2019	2020
Number of clients, as part of their primary care, who received HIV risk counseling	533	520	559
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	635	635	635
Rate	83.9%	81.9%	88%
Change from Previous Years Results	-6.8%	-2%	6.1%

2020 HIV Risk Counseling by Race/Ethnicity			
	Black	Hispanic	White
Number of clients, as part of their primary care, who received HIV risk counseling	260	222	66
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	294	255	74
Rate	88.4%	87.1%	89.2%

Pneumococcal Vaccination

- Percentage of clients living with HIV who ever received pneumococcal vaccination

	2018	2019	2020
Number of clients who received pneumococcal vaccination	507	523	518
Number of clients who: <ul style="list-style-type: none"> had a CD4 count > 200 cells/mm³, and had a medical visit with a provider with prescribing privileges at least twice in the measurement period 	610	612	608
Rate	83.1%	85.5%	85.2%
Change from Previous Years Results	-.3%	2.4%	-.3%

- 381 clients (62.7%) received both PPV13 and PPV23 (FY19- 59.3%, FY18- 65.1%)

2020 Pneumococcal Vaccination by Race/Ethnicity			
	Black	Hispanic	White
Number of clients who received pneumococcal vaccination	231	223	55
Number of clients who: <ul style="list-style-type: none"> had a CD4 count > 200 cells/mm³, and had a medical visit with a provider with prescribing privileges at least twice in the measurement period 	280	242	74
Rate	82.5%	92.1%	74.3%

Preventative Care and Screening: Mental Health Screening

- Percentage of clients living with HIV who have had a mental health screening

	2018	2019	2020
Number of clients who received a mental health screening	623	604	614
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement period	635	635	635
Rate	98.1%	95.1%	96.7%
Change from Previous Years Results	1.7%	-3%	1.6%

- 27.6% (175/635) had mental health issues. Of the 64 who needed additional care, 58 (90.6%) were either managed by the primary care provider or referred; 6 clients refused a referral.

Preventative Care and Screening: Tobacco Use: screening & cessation intervention

- Percentage of clients living with HIV who were screened for tobacco use one or more times with 24 months and who received cessation counseling if indicated

	2018	2019	2020
Number of clients who were screened for tobacco use in the measurement period	627	634	634
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement period	635	635	635
Rate	98.7%	99.8%	99.8%
Change from Previous Years Results	-1.3%	1.1%	0%

- Of the 634 clients screened, 159 (25.1%) were current smokers.
- Of the 159 current smokers, 114 (71.7%) received smoking cessation counseling, and 5 (3.1%) refused smoking cessation counseling

Substance Use Screening

- Percentage of clients living with HIV who have been screened for substance use (alcohol & drugs) in the measurement year*

	2018	2019	2020
Number of new clients who were screened for substance use within the measurement year	631	632	628
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement period	635	635	635
Rate	99.4%	99.5%	98.9%
Change from Previous Years Results	.3%	.1%	-.6%

*HAB measure indicates only new clients be screened. However, Houston EMA standards of care require medical providers to screen all clients annually.

- 4.9% (31/635) had a substance use disorder. Of the 31 clients who needed referral, 24 (77.4%) received one, and 4 (12.9%) refused.

Syphilis Screening

- Percentage of clients living with HIV who had a test for syphilis performed within the measurement year

	2018	2019	2020
Number of clients who had a serologic test for syphilis performed at least once during the measurement year	602	600	604
Number of clients who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	635	635	635
Rate	94.8%	94.5%	95.1%
Change from Previous Years Results	2.4%	-.3%	.6%

- 8.8% (56/635) new cases of syphilis diagnosed

Other Measures

Reproductive Health Care

- Percentage of reproductive-age women living with HIV who received reproductive health assessment and care (i.e, pregnancy plans and desires assessed and either preconception counseling or contraception offered)

	2018	2019	2020
Number of reproductive-age women who received reproductive health assessment and care	29	37	40
Number of reproductive-age women who: <ul style="list-style-type: none"> did not have a hysterectomy or bilateral tubal ligation, and had a medical visit with a provider with prescribing privileges at least twice in the measurement period 	54	66	67
Rate	53.7%	56.1%	59.7%
Change from Previous Years Results	18.8%	2.4%	3.6%

Intimate Partner Violence Screening

- Percentage of clients living with HIV who received screening for current intimate partner violence

	2018	2019	2020
Number of clients who received screening for current intimate partner violence	592	577	553
Number of clients who: <ul style="list-style-type: none"> had a medical visit with a provider with prescribing privileges at least twice in the measurement period 	635	635	635
Rate	93.2%	90.9%	87.1%
	14.6%	-2.3%	-3.8%

* 1/635 screened positive

Adherence Assessment & Counseling

- Percentage of clients living with HIV on ART who were assessed for adherence at least once per year

	Adherence Assessment		
	2018	2019	2020
Number of clients, as part of their primary care, who were assessed for adherence at least once per year	631	627	635
Number of clients on ART who had a medical visit with a provider with prescribing privileges at least twice in the measurement year	631	627	635
Rate	100%	100%	100%
Change from Previous Years Results	0%	0%	0%

ART for Pregnant Women

- Percentage of pregnant women living with HIV who are prescribed antiretroviral therapy (ART)

	2018	2019	2020
Number of pregnant women who were prescribed ART during the 2nd and 3rd trimester	3	2	3
Number of pregnant women who had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year	3	2	3
Rate	100%	100%	100%
Change from Previous Years Results	0%	0%	0%

Primary Care: Diabetes Control

- Percentage of clients living with HIV and diabetes who maintained glucose control during measurement year

	2018	2019	2020
Number of diabetic clients whose last HbA1c in the measurement year was <8%	35	38	55
Number of diabetic clients who had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year	67	65	82
Rate	52.2%	58.5%	67.1%
Change from Previous Years Results	-12.7%	6.3%	8.6%

- 635/635 (100%) of clients were screened for diabetes and 82/635 (12.9%) were diagnosed diabetic

Primary Care: Hypertension Control

- Percentage of clients living with HIV and hypertension who maintained blood pressure control during measurement year

	2018	2019	2020
Number of hypertensive clients whose last blood pressure of the measurement year was <140/90	145	147	157
Number of hypertensive clients who had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year	180	181	179
Rate	80.6%	81.2%	87.7%
Change from Previous Years Results	0%	.6%	6.5%

- 179/635 (28.2%) of clients were diagnosed with hypertension

Primary Care: Breast Cancer Screening

- Percentage of women living with HIV, over the age of 41, who had a mammogram or a referral for a mammogram, in the previous two years

	2018	2019	2020
Number of women over age 41 who had a mammogram or a referral for a mammogram documented in the previous two years	141	142	145
Number of women over age 41 who had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year	164	167	166
Rate	86%	85%	87.3%
Change from Previous Years Results	-1.7%	-1%	2.3%

Primary Care: Colon Cancer Screening

- Percentage of clients living with HIV, over the age of 50, who received colon cancer screening (colonoscopy, sigmoidoscopy, or fecal occult blood test) or a referral for colon cancer screening

	2018	2019	2020
Number of clients over age 50 who had colon cancer screening or a referral for colon cancer screening	127	123	161
Number of clients over age 50 who had a medical visit with a provider with prescribing privileges, i.e. MD, PA, NP at least twice in the measurement year	160	173	192
Rate	79.4%	71.1%	83.9%
Change from Previous Years Results	17.8%	-8.3%	12.8%

Conclusions

The Houston EMA continues to demonstrate high quality clinical care. Overall, performance rates were comparable to the previous year, which is particularly reassuring in light of the COVID-19 pandemic that occurred in FY20. The decreases seen in Influenza Vaccination and IPV screening were likely related to the increase in telehealth services during the measurement year. The increased telehealth services did not appear to impact other performance measures, and in fact, primary care measures such as diabetes and hypertension control improved. Racial and ethnic disparities continue to be seen, particularly for viral load suppression rates. Eliminating racial and ethnic disparities in care are a priority for the EMA, and will continue to be a focus for quality improvement.

Overview

Each year, the Ryan White Grant Administration Quality Management team conducts chart review in order to continuously monitor case management services and understand how each agency implements workflows to meet quality standards for their funded service models. This process is a supplemental complement to the programmatic and fiscal audit of each program, as it helps to provide an overall picture of quality of care and monitor quality performance measures.

A total of 624 medical case management client records were reviewed across seven of the ten Ryan White-Part A funded agencies, including a non-primary care site that provides Clinical Case Management services. The dates of service under review were March 1, 2020- February 28, 2021. The sample selection process and data collection tool are described in subsequent sections.

Case Management is defined by the Ryan White legislation as a, “range of client-centered services that link clients with health care, psychosocial, and other services,” including coordination and follow-up of medical treatment and “adherence counseling to ensure readiness for and adherence to HIV complex treatments.” Case Managers assist clients in navigating the complex health care system to ensure coordination of care for the unique needs of People Living With HIV. Continuous assessment of need and the development of individualized service plans are key components of case management. Due to their training and skill sets in social services, human development, psychology, social justice, and communication, Case Managers are uniquely positioned to serve clients who face environmental and life issues that can jeopardize their success in HIV treatment, namely, mental health and substance abuse, poverty and access to stable housing and transportation, and poor social support networks.

Ryan White Part-A funds three distinct models of case management: Medical Case Management, Non-Medical Case Management (or Service Linkage Work), and Clinical Case Management, which must be co-located in an agency that offers Mental Health treatment/counseling and/or Substance Abuse treatment. Some agencies are also funded for Outreach Services, which complement Case Management Services and are designed to locate and assist clients who are on the cusp of falling out of care in order to re-engage and retain them back into care.

The Tool

A copy of the Case Management Chart Review tool is available in the Appendix of this report.

The Case Management Chart Review tool is a pen and paper form designed to standardize data collection and analysis across agencies. The purpose of the tool is to capture information and quantify services that can present an overall picture of the quality of case management services provided within the Ryan White Part-A system of care. This way, strengths and areas of improvement can be identified and continuously monitored.

The coversheet of the chart abstraction tool captures basic information about the client, including their demographics, most recent appointments, lab results, and any documented psychological, medical, or social issues or conditions that would be documented in their medical record.

The content of the second sheet focuses on coordination of case management services. There is space for the chart abstractor to record what type of worker assisted the client (Medical Case Manager, Service Linkage Worker, Outreach Worker or Clinical Case Manager) and what types of services were provided. It is expected that any notes about case management closure are recorded, as well as any assessments or service plans or documented reasons for the absence of assessments or service plans.

The Sample

In order to conduct a thorough and comprehensive review, a total of 624 client records were reviewed across seven agencies for the 2020-2021 grant year. This included sixty-one (61) Clinical Case Management charts at a non-primary care site. In this Case Management Chart Review Report, any section that evaluated a primary care related measure excludes the sample of the non-primary care site. Minimum sample size was determined in accordance with *Center for Quality Improvement & Innovation* sample size calculator based on the total eligible population that received case management services at each site.

Agency	A	B	C	D	E	F	G
# of Charts Reviewed	79	85	91	105	105	98	61
TOTAL	624 (563 excluding non-Primary Care site)						

For each agency, a randomized sample of clients who received a billable Ryan White- A service under at least one (1) of eleven (11) case management subcategory codes during the March 1, 2020- February 28, 2021 grant year was queried from the Centralized Patient Care Data Management System database. Each sample was determined to be comparable to the racial, ethnic, age, and gender demographics of each site’s overall case management patient population.

Cumulative Data Summaries

APPOINTMENTS & ENCOUNTERS

The number of HIV-related primary care appointments and case management encounters in the given year were counted for each client.

HIV-RELATED PRIMARY CARE APPOINTMENTS

For this measure, the number of face-to-face encounters and virtual telehealth visits for an HIV-related primary care appointment with a medical provider was counted. Each encounter was assessed for a minimum of 3 medical appointments. Any Viral Load that accompanied the appointment was also recorded.

HIV MEDICAL

# appt	A	B	C	D	E	F	TOTAL	PERCENT
0	1	4	11	31	8	4	59	10%
1	5	23	9	40	42	10	129	23%
2	18	27	10	26	38	15	134	24%
3	55	31	61	8	17	69	241	43%
<i>Total</i>	<i>79</i>	<i>85</i>	<i>91</i>	<i>105</i>	<i>105</i>	<i>98</i>	<i>563</i>	

The overall sample trends towards a higher number of primary care appointment in the year, with most of the case management review clients having at least 3 appointments in the year (43%), followed by (24%) of the clients having 2 appointments in the year.

CASE MANAGEMENT ENCOUNTERS

Frequency of case management encounters were also reviewed. The number and types of the encounters (face-to-face vs. phone), as well as who provided the service (Clinical, Medical, or Non-Medical Case Manager) were also recorded.

The distribution of frequency of case management encounters could be described as evenly distributed across encounters.

CASE MGMNT

appointments	A	B	C	D	E	F	G	TOTAL	PERCENT
1	19	23	17	35	19	32	8	153	25%
2	21	17	13	12	30	23	6	122	20%
3	9	10	12	12	22	24	15	104	17%
4	17	19	16	22	10	10	13	107	18%
5	13	16	33	24	24	9	19	138	22%
<i>Total</i>	<i>79</i>	<i>85</i>	<i>91</i>	<i>105</i>	<i>105</i>	<i>98</i>	<i>61</i>	<i>624</i>	

VIRAL SUPPRESSION

Any results of HIV Viral Load laboratory tests that accompanied HIV-related primary care appointments were recorded as part of the case management chart abstraction. Up to three laboratory tests could be recorded. Lab results with an HIV viral load result of less than 200 copies per milliliter were considered to be virally suppressed.

Upon coding, clients who were suppressed for all of their recorded labs (whether they had one, two, or three tests done within the year), were coded as “Suppressed.” Clients who were unsuppressed (>200 copies/mL) for all of their labs were coded as “Unsuppressed.” Clients who had more than one laboratory test done and were suppressed for at least one and unsuppressed for at least one were coded as “Mixed Status,” and clients who had no laboratory tests done within the entire year were coded as “Unknown.”

SUPPRESSION STATUS	A	B	C	D	E	F	TOTAL	PERCENT
Suppressed for all labs	32	31	43	72	72	33	283	50%
Mixed status	0	0	0	3	10	0	13	2%
Unknown (no recent labs on file)	44	51	37	21	10	55	218	39%
Unsuppressed for all labs	3	3	11	9	13	10	49	9%
<i>Total</i>	<i>79</i>	<i>85</i>	<i>91</i>	<i>105</i>	<i>105</i>	<i>98</i>	<i>563</i>	

Across all primary care sites, the case management clients reviewed for these samples had a viral load suppression rate of 50%. In contrast, this result is much lower than what is typical for the Ryan White Part A Houston Primary Care Chart review, which has hovered around 85% for the past several years. This difference may be due to several factors, mainly the Covid-19 pandemic and reduction of in-person labs due to telehealth visits. The Primary Care chart review sample is collected from a pool of clients who are considered *in care*, or have at least two medical appointments with a provider with prescribing privileges in the review year. Additionally, “fluctuating viral load” is one of the eligibility criteria for medical case management, so clients who have challenges maintaining a suppressed viral load are more likely to be seen by case management and be included in this sample.

CARE STATUS

The chart abstractor also documented any circumstances in the record for which a client was new, lost, returning to care, or some combination of those care statuses. A client was considered “New to Care,” if they were receiving services for the first time at that particular agency (not necessarily new to HIV treatment or the Houston Ryan White system of care). “Lost to Care” was defined as not being seen for an HIV-related primary care appointment within the last six months and not having a future appointment scheduled, even beyond the review year. “Re-engaged in Care” was defined as any client who was previously lost to care, either during or before the review year, and later attended an HIV-related primary care appointment.

CARE STATUS	A	B	C	D	E	F	TOTAL	PERCENT
New to Care	11	5	11	1	2	5	35	6%
Lost to Care	11	2	1	15	11	2	42	7%
Re-engaged in Care	0	0	0	1	0	0	1	1%
Both New and later Lost to Care in the same review year	8	2	20	3	17	15	65	12%
Re-engaged and later lost again	0	0	0	1	1	0	2	<1%
N/A	49	76	59	84	74	76	418	74%
<i>Total</i>	<i>79</i>	<i>85</i>	<i>91</i>	<i>105</i>	<i>105</i>	<i>98</i>	<i>563</i>	

Overall, 6% of the sample was considered New to Care, 7% was Lost to Care, and <1% was Re-engaged in Care.

When a client’s attendance met one of the above care statuses, their medical record was reviewed to understand if case management or other staff was involved in coordinating their care. Activities that counted as “Coordination of Care” were any actions that welcomed the client into or back into care or attempted to retain them in care, such as: reminder phone calls, follow-up calls, attendance, or introduction at the first appointment, or home visits.

COMORBIDITIES

To understand and document common comorbidities within the Houston Ryan White system of care, co-occurring conditions were recorded, including mental health and substance abuse issues, other medical conditions, and social conditions. This inventorying of co-morbidities may prove particularly helpful for selecting future training topics for case management staff.

MENTAL HEALTH & SUBSTANCE USE DISORDER (history or active)

Any diagnosis of a mental health disorder (MH) or substance use disorder issue (SUD) was recorded in the chart review tool, including a history of mental illness or substance use. All Electronic Medical Records include some variation of a "Problem List" template. This list was often a good source of information for MH and SUD diagnoses, but providers sometimes also documented diagnoses or known histories of illness within progress notes without updating the Problem List. Clients sometimes also self-reported that they had been diagnosed with one of the below conditions by a previous medical provider. Any indication of the presence of mental illness or SUD, regardless of where the information was housed within the medical record, was recorded on the chart abstraction tool. Clients could also have or have had more than one of the MH or SUD issues. Any conditions other than alcohol misuse, other SUD, depression, bipolar disorder, anxiety, or schizophrenia were recorded as "Other." The most common types of condition coded as "Other" was Post-Traumatic Stress Disorder.

Diagnosis or Issue	A	B	C	D	E	F	G	TOTAL	PERCENT
Alcohol abuse/dependence	3	2	5	1	13	6	20	50	9%
Other Substance dependence	14	1	5	0	15	7	19	61	10%
Depression	16	11	32	14	42	33	37	185	32%
Bipolar disorder	6	5	7	1	5	10	14	48	8%
Anxiety	9	12	14	51	28	22	32	168	29%
Schizophrenia	1	1	0	14	1	2	7	26	4%
Other	2	0	11	2	12	9	10	46	8%

Overall, 93% of the sample had either an active diagnosis or history of a mental health or substance abuse issue documented somewhere within their medical record. This is inclusive of the Clinical Case Management site, for which diagnosis with or clinical indication of a MH or SUD issue is an eligibility criteria.

MENTAL HEALTH & SUBSTANCE USE DISORDER REFERRALS

For clients with an *active* diagnosis of a mental health or SUD issue, the chart abstractor recorded if they were referred or already engaged in MH/SUD services.

MH referral	A	B	C	D	E	F	TOTAL	PERCENT
N/A	75	82	55	100	97	88	497	88%
Yes	3	3	13	5	8	10	42	7%
No	1	0	23	0	0	0	24	4%
Total	82	85	91	105	105	98	563	

Overall, 88% of the sample would not have been appropriate for a MH or SUD referral based on the information available in their medical record. An additional 7% either did receive a referral or were already engaged in treatment and 4% did not receive a referral.

MEDICAL CONDITIONS

Medical conditions other than HIV were also recorded in an effort to understand what co-occurring conditions may be considered commonly managed alongside HIV within the case management population. Sexually Transmitted Infections and Hypertension were common, at 33% and 25% prevalence within the sample, respectively. The site visit tool does not list obesity as a medical condition however, obesity was the most common co-occurring condition that was coded in the “Other” category.

Medical Condition	A	B	C	D	E	F	TOTAL	PERCENT
Smoking (hx or current)	10	7	12	11	33	10	83	16%
Opportunistic Infection	0	0	3	6	0	0	9	2%
STIs	38	16	48	3	39	31	175	33%
Diabetes	5	11	8	4	20	22	70	13%
Cancer	0	3	1	6	0	1	11	2%
Hepatitis	7	5	1	7	9	9	38	7%
Hypertension	12	37	21	11	22	28	131	25%
Other	2	3	5	0	8	1	19	4%

SOCIAL CONDITIONS

Any indication within the medical record that a client had experienced homelessness/housing-related issues, pregnancy/pregnancy-related issues, a release from jail or prison, or intimate partner violence at any point within the review year was recorded in the chart abstraction tool. Homelessness and housing issues were the most commonly identified “Social Condition” within the sample.

Social Issue	A	B	C	D	E	F	G	TOTAL	PERCENT
Homelessness or housing-related issues	5	0	3	4	15	1	10	38	6%
Pregnancy or pregnancy-related issues	6	2	0	0	0	0	0	8	1%
Recently released	0	0	1	0	2	0	0	3	<1%
Intimate Partner Violence	3	0	0	0	5	0	10	18	2%

COMPREHENSIVE ASSESSMENTS

A cornerstone of service provision within case management is the opportunity for the client to be formally assessed at touchpoints throughout the year for their needs, treatment goals, and action steps for how they will work with the case manager or care team to achieve their treatment goals. Agencies need to use an approved assessment tool and service plan, which may either be the sample tools available through Ryan White Grant Administration or a pre-approved tool of the agency’s choosing.

The Ryan White Part-A Standards for medical case management state that a comprehensive assessment should be completed with the client at intake and that they should be re-assessed at least every six months for as long as they are receiving medical case management services. A more formal, comprehensive assessment should be used at intake and annually, and a brief reassessment tool is sufficient at the 6-month mark. In other words, the ideal standard is that every client who receives case management services for an entire year should have at least two comprehensive assessments on file. A service plan should accompany each comprehensive assessment to outline the detailed plan of how the identified needs will be addressed with the client.

# of Comp assessments	A	B	C	D	E	F	G	TOTAL	PERCENT
0	62	85	78	100	89	83	0	497	79%
1	17	0	13	3	16	15	15	79	13%
2	0	0	0	2	0	0	9	11	2%
N/A	0	0	0	0	0	0	37	37	6%
Total	79	85	95	105	105	98	61	624	

The client was considered “N/A” for a comprehensive assessment if they did not work with a medical case manager throughout the year. As outlined above, 6% of the sample did not work with a Medical Case Manager within the year. 79% of the sample received zero comprehensive assessments, 13% received one, and 2% received two.

SERVICE PLANS

As mentioned, each comprehensive assessment should be accompanied by a service plan, otherwise known as a care plan, to outline what action(s) will be taken to address the needs identified on the comprehensive assessment. A service plan can be thought of as an informal, working, contract between client and social worker for accountability of needed actions, and in what order, to meet a client’s determined treatment goals. As with the comprehensive assessment, each completed service plan was recorded in the chart abstraction tool, along with any documented justification for why a service plan was missing if it should have been completed.

# of service plans	A	B	C	D	E	F	G	TOTAL	PERCENT
0	65	82	91	102	95	98	7	540	87%
1	14	3	0	2	10	0	10	39	6%
2	0	0	0	1	0	0	7	8	1%
N/A	0	0	0	0	0	0	37	37	6%
Total	79	85	91	105	105	98	61	624	

It is notable that less service plans are completed than comprehensive assessments, even though the two processes are intended to occur together, one right after the other. RWGA experienced a transition in CM chart review auditors midway through the chart review process. As a result, it is unclear what the criteria for determining a client was “N/A” at agency “G”.

BRIEF ASSESSMENTS

Like Medical Case Management, Non-Medical Case Management is guided by a continuous process of ongoing assessment, service provision, and evaluation. Clients should be assessed at intake using a Ryan White Grant Administration approved brief assessment form and should be reassessed at six-month intervals if they are still being serviced by a Non-Medical Case Manager.

# of Brief assessments	A	B	C	D	E	F	TOTAL	PERCENT
0	52	73	55	56	30	80	346	61%
1	24	12	34	38	54	18	180	33%
2	3	0	2	7	1	0	13	2%
N/A	0	0	0	4	20	0	24	4%
Total	79	85	91	105	105	98	563	

Completion of brief assessments were recorded. 4% of the sample would not been applicable for a brief assessment, as they did not receive services from a Non-Medical Case Manager. 61% of the sample received zero brief assessments, 33% received one, and 2% received two.

ASSESSED NEEDS

All data from assessment tools was captured in the chart review tool. A total of 624 Comprehensive Assessments and 563 Brief Assessments were reviewed and recorded to quantify the frequency of needs. The count recorded is a raw count of how many times a need was recorded, encompassing both comprehensive and brief assessments and including clients who may have had the same need identified more than once at different points in time.

The most frequently assessed needs were: 1) Medical/Clinical, 2) Dental Care, 3) Vision Care, 4) Medication Adherence Counseling, 5) Mental Health, and (6) Insurance. It should be noted, however, that there are no universal standards or instructions across case management systems on how to use these tools or how these needs are defined. Anecdotally, some case managers reported that they automatically checked “Medical/Clinical” and “Medication Adherence Counseling” as a need, regardless of whether or not the client needed assistance accessing medical care, because it was their understanding that this section *always* needed to be checked in order to justify billing for medical case management services. Therefore, this compilation of comprehensive and brief assessments should not be considered representative of *true need* within the HIV community in Houston, but rather, as representative of issues that case managers are discussing with clients.

Need identified on assessment

	A	B	C	D	E	F	G	TOTAL	PERCENT
Medical/Medication	42	12	41	37	24	35	8	199	8%

Medication Adherence Counseling	44	9	43	19	27	43	17	182	7%
Client Strengths	1	0	0	1	0	0	3	5	1%

Conclusion

The 2020-2021 Case Management chart review highlighted many trends about the case management client population, strengths in case management performance, and areas identified for future attention and improvement. This report also gives consideration to challenges and barriers related to Covid-19 pandemic.

The most common co-occurring conditions were: Sexually Transmitted Infections (33%), Depression (32%), and Hypertension (25%). Diabetes and Obesity were also relatively common and providing overview information on nutrition counseling may be a useful topic in frontline case management trainings. The prevalence of complex co-morbidities emphasizes the unique benefit that case managers contribute to the HIV treatment setting.

There were also areas of high performance displayed in this chart review. Most (43 %) of the clients in the sample had at least three HIV-related primary care appointments within the review year. Case Management staff demonstrated a high level of coordination of care in areas. For example, 90% of the clients who were New, Lost, or Returning to Care (or some combination) received coordination of care activities from case management to retain them in care.

HCPH is the local public health agency for the Harris County, Texas jurisdiction. It provides a wide variety of public health activities and services aimed at improving the health and well-being of the Harris County community.

Follow HCPH on Twitter [@hcphtx](https://twitter.com/hcphtx) and like us on [Facebook](https://www.facebook.com/hcphtx)

Introduction

Part A funds of the Ryan White Care Act are administered in the Houston Eligible Metropolitan Area (EMA) by the Ryan White Grant Administration Section of Harris County Public Health. During FY 20, a comprehensive review of client dental records was conducted for services provided between 3/1/20 to 2/29/21. This review included one provider of Adult Oral Health Care that received Part A funding for rural-targeted Oral Health Care in the Houston EMA.

The primary purpose of this annual review process is to assess Part A oral health care provided to people living with HIV in the Houston EMA. Unlike primary care, there are no federal guidelines published by the U.S Health and Human Services Department for oral health care targeting people living with HIV. Therefore, Ryan White Grant Administration has adopted general guidelines from peer-reviewed literature that address oral health care for people living with HIV, as well as literature published by national dental organizations such as the American Dental Association and the Academy of General Dentistry, to measure the quality of Part A funded oral health care. The Ryan White Grant Administration Project Coordinator for Clinical Quality Improvement (PC/CQI) performed the chart review.

Scope of This Report

This report provides background on the project, supplemental information on the design of the data collection tool, and presents the pertinent findings of the FY 20 oral health care chart review. Any additional data analysis of items or information not included in this report can likely be provided after a request is submitted to Ryan White Grant Administration.

The Data Collection Tool

The data collection tool employed in the review was developed through a period of in-depth research and a series of working meetings between Ryan White Grant Administration. By studying the processes of previous dental record reviews and researching the most recent HIV-related and general oral health practice guidelines, a listing of potential data collection items was developed. Further research provided for the editing of this list to yield what is believed to represent the most pertinent data elements for oral health care in the Houston EMA. Topics covered by the data collection tool include, but are not limited to the following: basic client information, completeness of the health history, hard & soft tissue examinations, disease prevention, and periodontal examinations.

The Chart Review Process

All charts were reviewed by the PC/CQI, a Master's-level registered nurse experienced in identifying documentation issues and assessing adherence to published guidelines. The collected data for each site was recorded directly into a preformatted database. Once all data collection was completed, the database was queried for analysis. The data collected during this process is intended to be used for the purpose of service improvement.

The specific parameters established for the data collection process were developed from HIV-related and general oral health care guidelines available in peer-reviewed literature, and the professional experience of the reviewer on standard record documentation practices. Table 1 summarizes the various documentation criteria employed during the review.

Table 1. Data Collection Parameters

Review Area	Documentation Criteria
Health History	Completeness of Initial Health History: includes but not limited to past medical history, medications, allergies, substance use, HIV MD/primary care status, physician contact info, etc.; Completed updates to the initial health history
Hard/Soft Tissue Exam	Findings—abnormal or normal, diagnoses, treatment plan, treatment plan updates
Disease Prevention	Prophylaxis, oral hygiene instructions
Periodontal screening	Completeness

The Sample Selection Process

The sample population was selected from a pool of 366 unduplicated clients who accessed Part A oral health care between 3/1/20 and 2/29/21. The medical charts of 75 of these clients were used in the review, representing 20% of the pool of unduplicated clients.

In an effort to make the sample population as representative of the actual Part A oral health care population as possible, the EMA's Centralized Patient Care Data Management System (CPCDMS) was used to generate a list of client codes to be reviewed. The demographic make-up (race/ethnicity, gender, age) of clients accessing oral health services between 3/1/20 and 2/29/21 was determined by CPCDMS, which in turn allowed Ryan White Grant Administration to generate a sample of specified size that closely mirrors that same demographic make-up.

Characteristics of the Sample Population

The review sample population was generally comparable to the Part A population receiving rural-targeted oral health care in terms of race/ethnicity, gender, and age. It is important to note that the chart review findings in this report apply only to those who received rural-targeted oral health care from a Part A provider and cannot be generalized to all Ryan White clients or to the broader population of people living with HIV. Table 2 compares the review sample population with the Ryan White Part A rural-targeted oral health care population as a whole.

	Sample		Ryan White Part A EMA	
	Number	Percent	Number	Percent
Race/Ethnicity				
African American	30	40%	162	44.2%
White	44	58.7%	199	54.4%
Asian	0	0%	1	.3%
Native Hawaiian/Pacific Islander	0	0%	0	0%
American Indian/Alaska Native	1	1.3%	3	.8%
Multi-Race	0	0%	1	.3%
	75		366	
Hispanic Status				
Hispanic	22	29.3%	103	28.1%
Non-Hispanic	53	70.7%	263	71.9%
	75		366	
Gender				
Male	54	72%	245	66.9%
Female	21	28%	116	31.7%
Transgender	0	0%	5	1.4%
	75		366	
Age				
<=24	2	2.7%	15	4.1%
25 – 34	15	20%	83	22.7%
35 – 44	20	26.7%	91	24.9%
45 – 54	19	25.3%	89	24.3%
55 – 64	14	18.7%	70	19.1%
65+	5	6.7%	18	4.9%
	75		366	

Findings

Clinic Visits

Information gathered during the FY 20 chart review included the number of visits during the study period. The average number of oral health visits per patient in the sample population was seven.

Health History

A complete and thorough assessment of a client's medical history is essential. Such information, such as current medications or any history of alcoholism for example, offers oral health care providers key information that may determine the appropriateness of prescriptions, oral health treatments and procedures.

Assessment of Medical History

	2018	2019	2020
Primary Care Provider	97%	100%	100%
Medical/Dental Health History* (annual form)	100%	99%	76%
Medical History 6-month Update (in medical notes)	96%	95%	93%

*HIV/AIDS Bureau (HAB) Performance Measures

Health Assessments

	2018	2019	2020
Vital Signs	100%	100%	100%
CBC documented	92%	96%	96%
Antibiotic Prophylaxis Given if Indicated	0% (0/1)	100% (1/1)	N/A

Prevention and Detection of Oral Disease

Maintaining good oral health is vital to the overall quality of life for people living with HIV because the condition of one's oral health often plays a major role in how well patients are able to manage their HIV disease. Poor oral health due to a lack of dental care may lead to the onset and progression of oral manifestations of HIV disease, which makes maintaining proper diet and nutrition or adherence to antiretroviral therapy very difficult.

to achieve. Furthermore, poor oral health places additional burden on an already compromised immune system.

	2018	2019	2020
Oral Health Education*	99%	99%	99%
Hard Tissue Exam	96%	92%	99%
Soft Tissue Exam	96%	92%	99%
Periodontal screening*	97%	94%	99%
X-rays present	99%	88%	99%
Treatment plan*	99%	100%	100%

*HIV/AIDS Bureau (HAB) Performance Measures

Phase I Treatment Plan Status

	2019	2020
Phase I Treatment plan complete*	55%	44%
Dental procedures done, additional procedures needed	35%	54%
No procedures needed	10%	1%

*HIV/AIDS Bureau (HAB) Performance Measures

Conclusions

Overall, oral health care services continues its trend of high quality care. The Houston EMA oral health care program has established a strong foundation for preventative care and we expect continued high levels of care for Houston EMA clients in future.

Introduction

Part A funds of the Ryan White Care Act are administered in the Houston Eligible Metropolitan Area (EMA) by the Ryan White Grant Administration of Harris County Public Health. During FY 20, a comprehensive review of client vision records was conducted for services provided between 3/1/20 to 2/29/21.

The primary purpose of this annual review process is to assess Part A vision care provided to people living with HIV in the Houston EMA. Unlike primary care, there are no federal guidelines published by the U.S Department of Health and Human Services for general vision care targeting people living with HIV. Therefore, Ryan White Grant Administration has adopted general guidelines published by the American Optometric Association, as well as internal standards determined by the clinic, to measure the quality of Part A funded vision care. The Ryan White Grant Administration Project Coordinator for Clinical Quality Improvement (PC/CQI) performed the chart review.

Scope of This Report

This report provides background on the project, supplemental information on the design of the data collection tool, and presents the pertinent findings of the FY 20 vision care chart review. Also, any additional data analysis of items or information not included in this report can likely be provided after a request is submitted to Ryan White Grant Administration.

The Data Collection Tool

The data collection tool employed in the review was developed through a period of in-depth research conducted by the Ryan White Grant Administration. By researching the most recent vision practice guidelines, a listing of potential data collection items was developed. Further research provided for the editing of this list to yield what is believed to represent the most pertinent data elements for vision care in the Houston EMA. Topics covered by the data collection tool include, but are not limited to the following: completeness of the Client Intake Form (CIF), CD4 and VL measures, eye exams, and prescriptions for lenses. See Appendix A for a copy of the tool.

The Chart Review Process

All charts were reviewed by the PC/CQI, a Master's-level registered nurse experienced in identifying documentation issues and assessing adherence to published guidelines. The collected data for each site was recorded directly into a preformatted database. Once all data collection was completed, the database was queried for analysis. The data collected during this process is intended to be used for the purpose of service improvement.

The specific parameters established for the data collection process were developed from vision care guidelines and the professional experience of the reviewer on standard record documentation practices. Table 1 summarizes the various documentation criteria employed during the review.

Table 1. Data Collection Parameters	
Review Area	Documentation Criteria
Laboratory Tests	Current CD4 and Viral Load Measures
Client Intake Form (CIF)	Completeness of the CIF: includes but not limited to documentation of primary care provider, medication allergies, medical history, ocular history, and current medications
Complete Eye Exam (CEE)	Documentation of annual eye exam; completeness of eye exam form; comprehensiveness of eye exam (visual acuity, refraction test, binocular vision assessment, fundus/retina exam, and glaucoma test)
Ophthalmology Consult (DFE)	Performed/Not performed
Lens Prescriptions	Documentation of the Plan of Care (POC) and completeness of the dispensing form

The Sample Selection Process

The sample population was selected from a pool of 2,911 unduplicated clients who accessed Part A vision care between 3/1/20 and 2/29/21. The medical charts of 150 of these clients were used in the review, representing 5.2% of the pool of unduplicated clients.

In an effort to make the sample population as representative of the actual Part A vision care population as possible, the EMA's Centralized Patient Care Data Management System (CPCDMS) was used to generate the lists of client codes. The demographic make-up (race/ethnicity, gender, age) of clients accessing vision care services between 3/1/20 and 2/29/21 was determined by CPCDMS, which in turn allowed Ryan White Grant Administration to generate a sample of specified size that closely mirrors that same demographic make-up.

Characteristics of the Sample Population

The review sample population was generally comparable to the Part A population receiving vision care in terms of race/ethnicity, gender, and age. It is important to note that the chart review findings in this report apply only to those who receive vision care from a Part A provider and cannot be generalized to all Ryan White clients or to the broader population of people with HIV or AIDS. Table 2 compares the review sample population with the Ryan White Part A vision care population as a whole.

**Table 2. Demographic Characteristics of FY 20 Houston EMA Ryan White
Part A Vision Care Clients**

Race/Ethnicity	Sample		Ryan White Part A EMA	
	Number	Percent	Number	Percent
African American	72	48%	1,496	51%
White	73	49%	1,322	46%
Asian	3	2%	35	1%
Native Hawaiian/Pacific Islander	0	0%	3	<1%
American Indian/Alaska Native	1	<1%	9	<1%
Multi-Race	1	<1%	36	1%
TOTAL	150		2,911	
Hispanic Status				
Hispanic	56	37%	1,026	35%
Non-Hispanic	94	63%	1,885	65%
TOTAL	150		2,911	
Gender				
Male	112	75%	2,113	73%
Female	38	25%	757	26%
Transgender Male to Female	0	0%	40	1%
Transgender Female to Male	0	0%	1	<1%
TOTAL	150		2,911	
Age				
<= 24	4	3%	110	4%
25 – 34	35	23%	708	24%
35 – 44	32	21%	763	26%
45 – 54	41	27%	717	25%
55 – 64	30	20%	497	17%
65+	8	5%	116	4%
TOTAL	150		2,911	

Findings

Laboratory Tests

Having up-to-date lab measurements for CD4 and viral load (VL) levels enhances the ability of vision providers to ensure that the care provided is appropriate for each patient. CD4 and VL measures indicate stage of disease, so in cases where individuals are in the late stage of HIV disease, special considerations may be required.

Patient chart records should provide documentation of the most recent CD4 and VL information. Ideally this information should be updated in coordination with an annual complete eye exam.

	2018	2019	2020
CD4	83%	94%	93%
VL	83%	94%	93%

Client Intake Form (CIF)

A complete and thorough assessment of a patient’s health history is essential when caring for individuals living with HIV or anyone who is medically compromised. The agency assesses this information by having patients complete the CIF. Information provided on the CIF, such as ocular history or medical history, guides clinic providers in determining the appropriateness of diagnostic procedures, prescriptions, and treatments. The CIF that is used by the agency to assess patient’s health history captures a wide range of information; however, for the purposes of this review, this report will highlight findings for only some of the data collected on the form.

Below are highlights of the findings measuring completeness of the CIF.

	2018	2019	2020
Primary Care Provider	87%	97%	92%
Medication Allergies	100%	100%	91%
Medical History	100%	99%	91%
Current Medications	100%	100%	98%
Reason for Visit	100%	100%	98%
Ocular History	100%	100%	91%

Eye Examinations (Including CEE/DFE) and Exam Findings

Complete and thorough examination of the eye performed on a routine basis is essential for the prevention, detection, and treatment of eye and vision disorders. When providing care to people living with HIV, routine eye exams become even more important because there are a number of ocular manifestations of HIV disease, such as CMV retinitis.

CMV retinitis is usually diagnosed based on characteristic retinal changes observed through a DFE. Current standards of care recommend yearly DFE performed by an ophthalmologist for clients with CD4 counts <50 cells/mm³ (2). One client in this sample had a CD4 count <50 cells/mm³.

	2018	2019	2020
Complete Eye Exam	100%	100%	100%
Dilated Fundus Exam	94%	95%	93%
Internal Eye Exam	100%	100%	100%
Documentation of Diagnosis	100%	100%	100%
Documentation of Treatment Plan	100%	100%	100%
Visual Acuity	100%	100%	100%
Refraction Test	100%	100%	100%
Observation of External Structures	100%	100%	100%
Glaucoma Test	100%	100%	100%
Cytomegalovirus (CMV) screening	94%	95%	93%

Ocular Disease

Seven clients (5%) demonstrated ocular disease, including cataracts, strabismus, diabetic retinopathy, and conjunctivitis. Two clients received treatment for ocular disease, two clients were referred to a specialty eye clinic, and three clients did not need treatment at the time of visit.

Prescriptions

Of records reviewed, 99% documented new prescriptions for lenses at the agency within the year.

Conclusions

Findings from the FY 20 Vision Care Chart Review indicate that the vision care providers perform comprehensive vision examinations for the prevention, detection, and treatment of eye and vision disorders. Performance rates are very high overall, and are consistent with quality vision care.
